National Coatings Announces SPF Roofing Line of Products

Camarillo, CA April 12, 2007 -- National Coatings Corporation (NCC), announces the release of their new Spray Polyurethane Foam (SPF) Roofing System adding to their extensive line of high performance, energy saving, sustainable roof systems for commercial and industrial buildings.

These new systems provide for industry leading, single source, Class A UL SPF Roofing assemblies, incorporating National Coatings (www.nationalcoatings.com) own 2.5, 2.7 or 3.0 pound foam, innovative AcryShield® Elastomeric roof coatings and optional brilliant White Armor™ granules or RoofGuard™ cementitious coating. This is a roofing system engineered to last the life of your building. AcryShield SPF Roofing Systems are designed to not degrade like other roofs. The redundant waterproofing from long-lasting sprayed polyurethane foam and high-performance 100% acrylic roof coating also eliminates up to 100% of UV attack and deterioration. Roof performance properties in year 15 are equivalent to the initial installation. Consider the National Roofing Foundation's comprehensive sprayed polyurethane foam roof study where Dr. Rene M. Dupuis of Structural Research, Inc. concludes, "The field data...demonstrates that SPF roof systems provide long term performance and sustainability." Designed R-Values are achievable with this fully-adhered, seamless, waterproofing system that has outstanding impact strength. Eliminate the most challenging problem of ponding water by custom tapering your roof as it is applied. All NCC AcryShield SPF Roofing Systems offer excellent value.

Key benefits include: Decades of sustainable performance which are easily renewed over the life of the building and may be guaranteed for up to 20 years. Meets numerous Factory Mutual and UL standards. Protecting and insulating your building reducing energy bills by up to 30% while lessening the impact on climate change. NCC SPF roofing installs over new roof decks or existing roofs avoiding expensive tear offs. Simplifies roof details and improves waterproofing performance. Self-flashes for a seamless layer of roofing protection.

Vince LaBruzzo, National Sales Manager for NCC states, "National Coatings is excited to be able to offer as a single source, the only California Title 24 compliant foam, coatings and roofing granules system that is economical, sustainable, quick and easy to install resulting in a leak free, energy saving, seamless solution."

About National Coatings Corporation

Performance through Innovation™, National Coatings Corporation (Camarillo, CA) is a leading manufacturer and supplier of premium-quality elastomeric roof and wall coating products. For over 25 years, NCC has provided its customers with leading edge products, support, and thought leadership.
